HOUSING MOUNTING TYPES

Before mounting the housing in place you will need to figure out where the placement of the power cord if installing a motorized system

This is a face mount housing and bracket set-up.

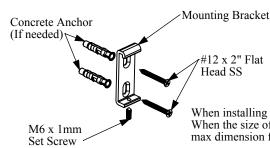

FACE MOUNT

This is an under the header mount housing and bracket set-up.

UNDER HEADER

S1 Series

4' - 6' = 2 Brackets

7' - 10' = 3 Brackets (One Centered)

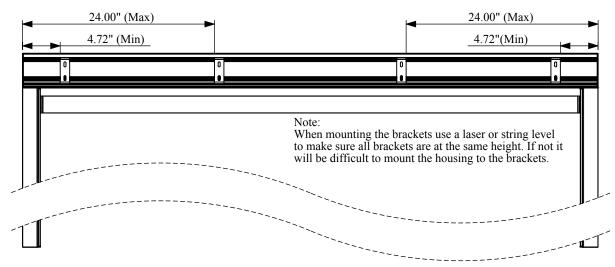

11' - 13' = 4 Brackets

S2 Series = 2 Brackets

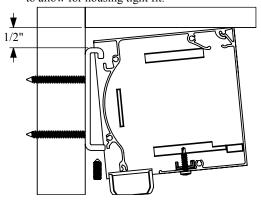

7' - 10' = 4 Brackets

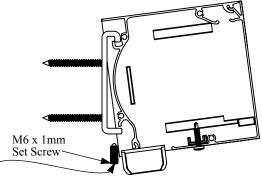

11' - 13' = 5 Brackets (One Centered) 14' - 17' = 6 Brackets

When installing the housing mounting brackets, the brackets on the ends need to be 4-3/4" from the end. When the size of door requires 3 brackets, the third will be in the middle. When 4 brackets are required 24" max dimension from the housing caps.

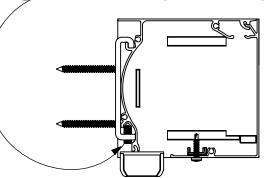

Housing bracket needs mounted 1/2" below soffit to allow for housing tight fit.

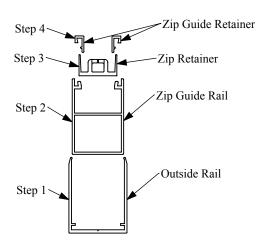

Mount housing by tilting housing slightly pushing it back against the bracket and using the $(M6\ x\ 1\text{mm}\ \text{set}\ \text{screw})$. Use 3mm allen wrench (provided) to lock in place.

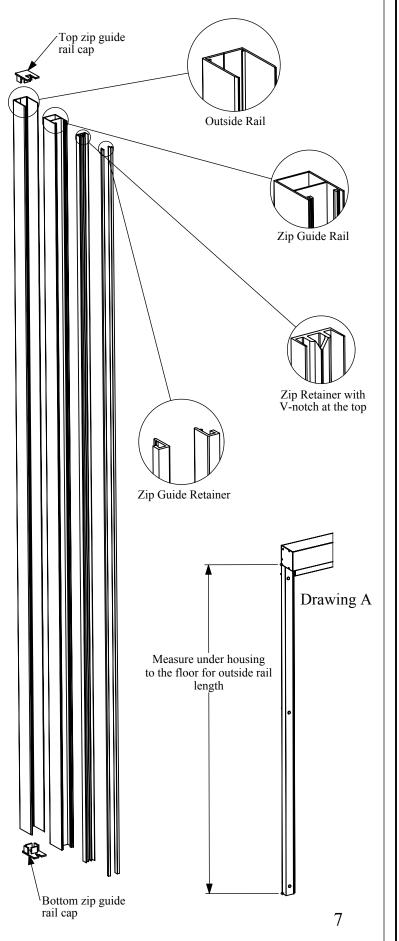

UNDER THE HEADER MOUNT M6 x 1mm Set Screw Housing Bracket set screwy Install the unit under the header 1.Remove the front cover screws (#8x3/4" Pan Head Tek) 2. Hinge the front cover up and remove 3. Rotate the housing into place and use (M6 x 1mm Set Screw) to lock in place Front Cover (C)This screw goes through the front cover #8 x 3/4" Pan Head Tek and into the housing cap Front Cover Screw Once the housing bracket set screws are in place 1.Install the front cover by rotating back in place 2.Install the front cover screws (#8 x 3/4" Pan Head Tek) Front Cover #8 x 3/4" Pan Head Tek Front Cover Screws

RAIL CUTTING

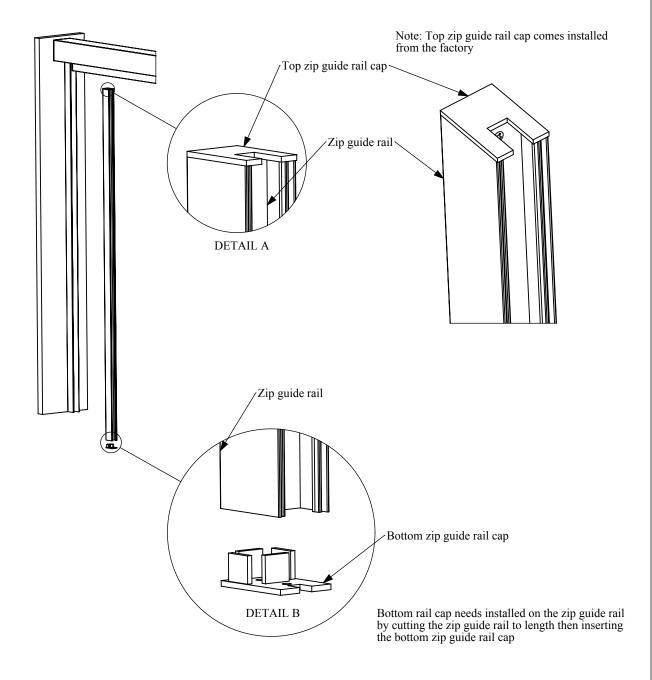

Cutting
1. Measure from the bottom of the housing to the ground, Use that dimension for the outside rail cut to length. (Drawing A)
2. Use the measurement from the outside rail and deduct 1/4" off for

the zip guide rail cut to length
3.Cut the zip retainer and the zip guide retainer (PVC parts) to the same length as the zip guide rail

8-18-21-B

Zip Guide Rail Cap Install

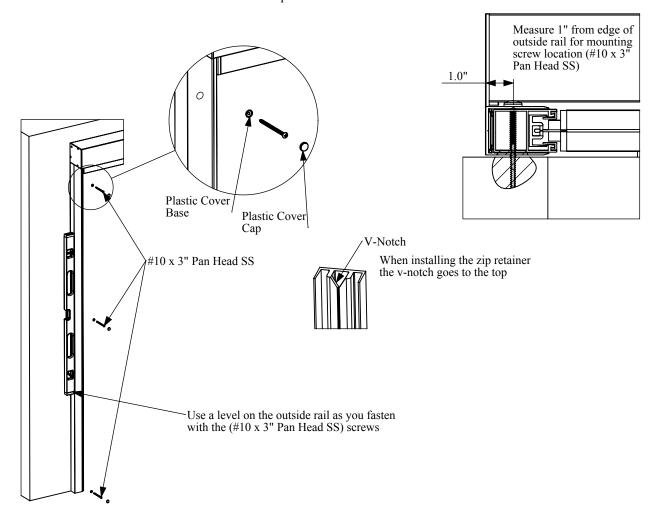

FACE MOUNT RAILS

This install is for mounting the rails on a surface or face mount.

- -Once the housing is mounted measure from under the housing cap to the ground to cut the outside rail to length. -Take the measurement from the outside rail deduct 1/4" and cut the zip guide rail
- -Use that same dimension from the zip guide rail length and cut the zip retainer and zip guide retainer.

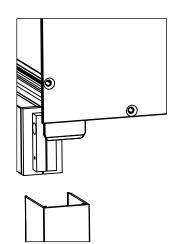

Note: Do not cut the v-notch off the zip retainer

This type of install is for surface mount (face mount)

- 1. Install the outside rail into the housing tab
- 2.Install the zip guide rail
- 3.Install the zip retainer Note: Install the V-notch at the top. Slide it over the zipper on the edge of the screen.
- 4. Install power temporarily to align rails before fastening
- 5. Use a level to align the rails then fasten with (#10 x 3" Pan Head SS) screws with the plastic cover caps and install
- 6.Install the zip guide retainer last

NOTE: Use 100% silicone spray on the zip guide to help with operation

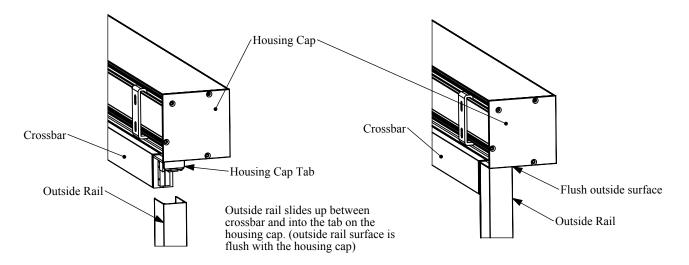

Outside rail slides up between crossbar and into the tab on the housing cap. (outside rail surface is flush with the housing cap)

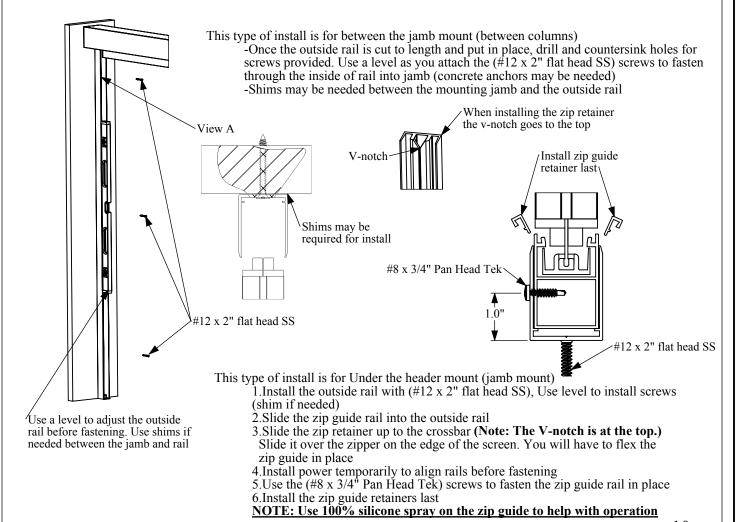

JAMB MOUNT INSTALL

This install is for mounting the rails between jambs or between columns.

- -Once the housing is mounted measure from under the housing cap to the ground to cut the outside rail to length.
- -Take the measurement from the outside rail deduct 1/4" and cut the zip guide rail
- -Use that same dimension from the zip guide rail length and cut the zip retainer and zip guide retainer.

Note: Do not cut the v notch off the zip retainer

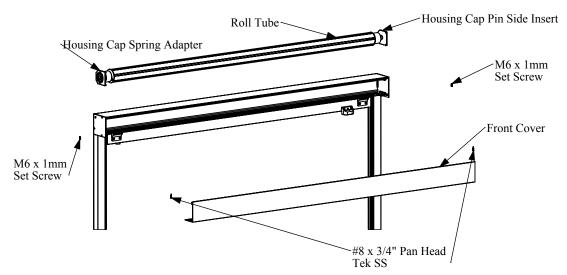

REMOVING THE ROLL TUBE ADDING SPRING TENSION

A spring unit will install the same as a motor unit as far as mounting the housing and rails

The spring unit comes from the factory with tension on the spring. If more or less tension is needed, this will need to be done in the field

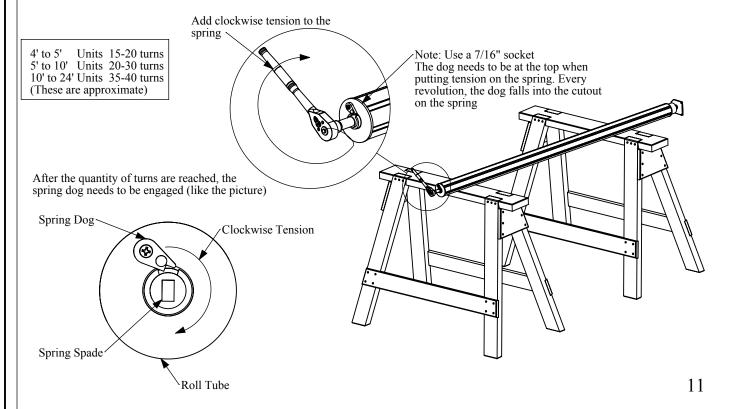

Removing the roll tube and adding or removing tension

- 1.Remove the screws that hold the front cover on (#8 x 3/4" Pan Head Tek SS) Qty:2
- 2.Remove the front cover by lifting it up to unhinge it from the back housing
- 3.Remove the zip guide retainers and the zip retainer
- 4.Remove the (M6 x 1mm Set Screws) Qty:2. These hold the spring adapter and the pin side insert in the housing cap 5.Slide the roll tube out of the housing.

WARNING the spring adapter will be under tension from the factory. When removing, one hand needs to hold the spring adapter so it won't fly off the end as you slide it out.

6.Once out, you can pull the spring adapter off the end of the spring. Make sure to hold onto the spring adapter. The tension will come unwound off the spring.

WARNING <u>Before adding tension make sure all of the tension is off the spring. If not, failure will occur by 1. Weak spring 2. Broken spring</u>

INSTALLING THE SPRING ROLL TUBE IN THE HOUSING Once the tension is put back on the spring you need to install the roll tube

Once the tension is put back on the spring you need to install the roll tube 1.Put the pin side idler insert in the roll tube.

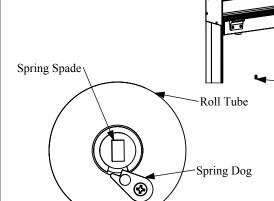

2.Put the spring adapter on the end of the spring

WARNING spring is under tension do not rotate spring adapter

WARNING *spring is under tension do not rotate spring adapter*NOTE: Make sure the dog on the end of the spring is in the down position 3. Slide the unit into the housing caps

4.Use the (M6 x 1mm set screws) to hold the inserts in place 5.Install the zip retainer and zip guide retainers in the rail Note: Make sure zipper screen edge slides into the zip retainer

When installing the spring adapter on the end of the roll tube the dog needs to be in the down position

Detail A

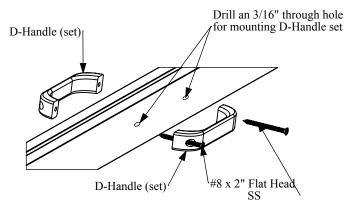

When installing the spring unit back into the housing this is how the end of the spring should look.(Detail A)

Spring Adapter

1. The spring dog has tension locked in place and is in the down position 2. The spring spade is vertical

Now the spring system is ready to slide into the housing caps

D-Handle Install

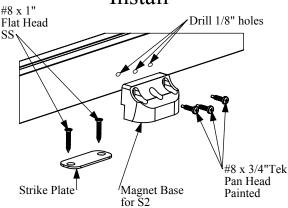

NOTE:

If you only want a half D-Handle use the side with through holes and drill 1/8" holes in the side of the crossbar you want the handle on. Use #8 x 3/4" Tek to attach.

Magnet Base & Strike Plate Install

M6 x 1mm

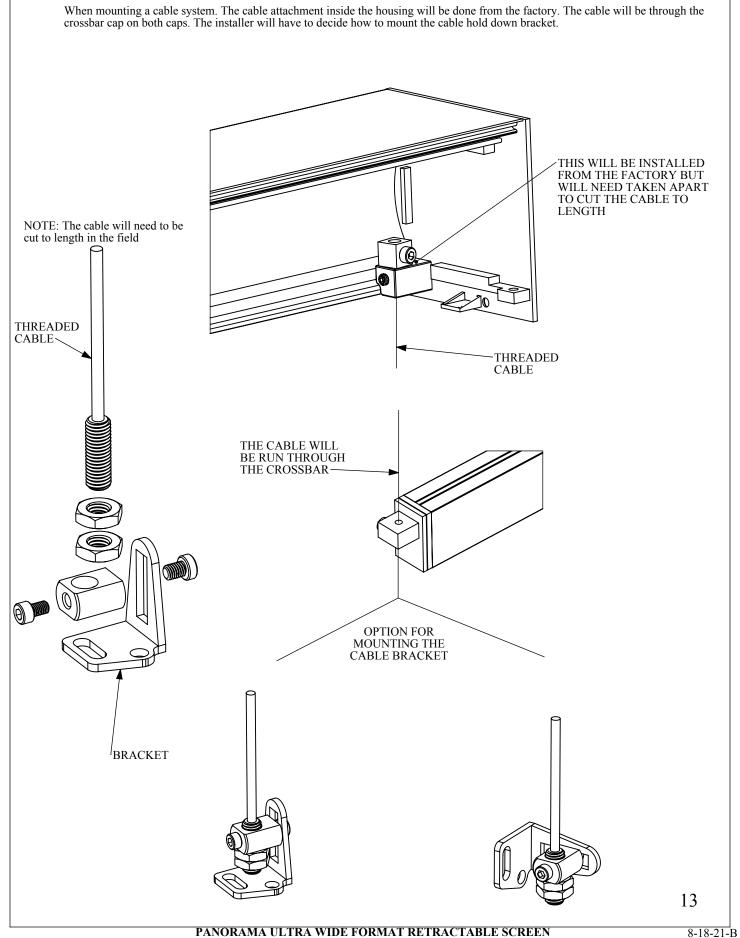

Set Screw

NOTE:

Magnets will be installed on S1 versions. You will only have to mount the strike plate

CABLE SYSTEM ATTACHMENT

Wiring Instructions for RTS 50mm motor

Hard Wire

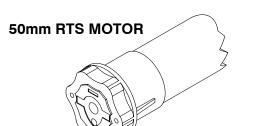

50mm RTS MOTOR WIRING COLOR CODE

HOT

NEUTRAL

GROUND

120V AC	CODE
BLACK	(H)HOT
WHITE	(N)NEUTRAL
GREEN	(G)GROUND

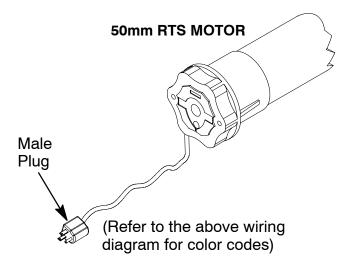

Note:
When hard wiring you
will need a switch or
plug to be able to turn
the power on and off for
maintenance

OR

GREEN

Wall Outlet

IMPORTANT: All wiring must conform to NEC (National Electric Code) and local codes.

You may hard wire your unit (top diagram) or attach a male plug to your pigtail wire (bottom diagram). *If you hard wire it you will need to turn it on and off for maintenance.*

LIMIT SETTING

Only have the power connected to one motor at a time

1. Assigning a remote to a motor (note: only works on the first remote)

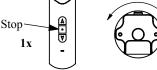

Method A. As you apply power the first time be ready with the remote to start the process you have (10 sec). If you take longer you can just unplug the power and try again.

Connect power to the motor the roll tube will vibrate or jog. You have 10 seconds to complete the

Press the Up and Down buttons simultaneously, then release

1x

Down

Press the Stop button 1 time, the

motor will vibrate or jog

the motor

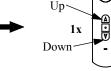

Method B. In order to use this method you have to remove the front cover to access the red button on the motor head.

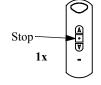

next step

Motor

The remote will now work with the motor

The remote will

now work with

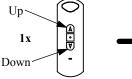

Press the red button on the motor for 1 second, the motor will vibrate or jog

Press the Up and Down buttons simultaneously, then release

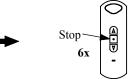

Press the Stop button 1 time, the motor will vibrate or jog

2. Checking the direction of the motor and changing if needed

Note: When you push the Up or the Down button to check the direction of the motor the screen will start traveling in that direction. You need to push the Stop button before you change the direction. Direction of the motor can be changed even after the limits are set

Press the Stop button 6 times

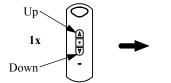

Press the Down button 1time, the motor will vibrate

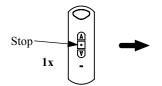

The Up and Down direction of the motor have been reversed

3.Turn on "Step by Step" mode

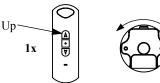

Note: "Step by Step" mode allows the motor to move fractions of an inch when the Up and Down buttons are pushed. When the Up and Down buttons are released the screen stops moving

Press the Up and Down buttons simultaneously, then release

Press the Stop button 1 time

Press the Up button 1 time, the motor will vibrate

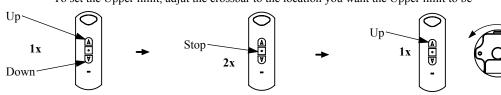

The motor is now in "Step by Step" mode

LIMIT SETTING

Only have the power connected to one motor at a time

4. Setting the Top limit

To set the Upper limit, adjut the crossbar to the location you want the Upper limit to be

Press the Up and Down buttons simultaneously, then release

Press the Stop button 2 times

Press the Up button 1 time, the motor will vibrate

Now the Top limit is set

5. Setting the Bottom limit

To set the Bottom limit, adjut the crossbar to the location you want the Bottom limit to be

Press the Stop button 2 times

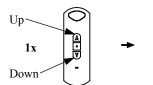

Now the Bottom limit

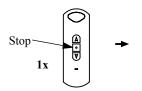

Press the Up and Down buttons simultaneously, then release

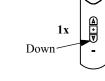

Press the Down button 1 time, the motor will vibrate

6.Turn off "Step by Step"

During Step by Step mode if you hold a direction button more than 2 sec the screen will will continue to run after you let go of the button until you push the stop button wich will put it back to Step by Step

The screen unit will operate normal

Press the Up and Down buttons simultaneously, then release

Press the Stop button 1 time

Press the Down button 1 time, the motor will vibrate

Turn on Obstacle Detection mode

This step makes sure the Obstacle Detection is on. This will detect if anything is under the screen when it touches the object it will stop then travel back up 12" and try going down again. If it touches the object again it will repeat this process 3 times then it will just stop 12" above the object waiting for you to clear the object and push Down

Press the Up and Down buttons simultaneously, then release

Press the Stop button 3 times, the motor will vibrate

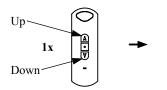

Press the Up button 1 time, the motor will vibrate

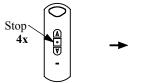

DELETING LIMITS

Only have the power connected to one motor at a time

Deleting the Top limit

This step will delete the Upper limit only

The Top limit is now deleted. To set a new Top limit skip to step 4

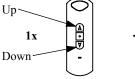

Press the Up and Down buttons simultaneously, then release

Press the Stop button 4 times

Press the Up button 1 time, the motor will vibrate

Deleting the Bottom limit

This step will delete the Lower limit only

The Bottom limit is now deleted. To set a new Bottom limit skip to step 5

Press the Up and Down buttons simultaneously, then release

Press the Stop button 4 times

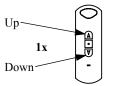

Press the Down button 1 time, the motor will vibrate

Deleting a remote (or channel) from a motor

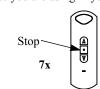

Stop

4x

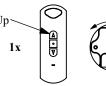

This will delete only the remote you are using in your hand

After this step start over setting the limits

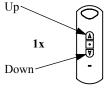

Press the Up and Down buttons simultaneously, then release

Press the Stop button 7 times

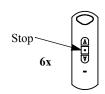

Press the Up button 1 time, the motor will vibrate

Deleting everthing saved to this motor

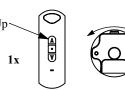

WARNING: This step will delete everthing saved to this motor and set it back to factory settings

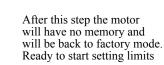

Press the Up and Down buttons simultaneously, then release

Press the Stop button 6 times

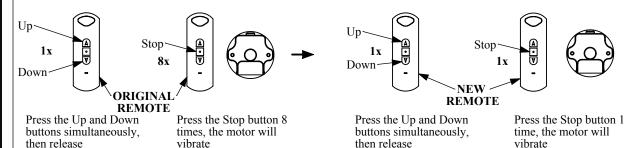

Press the Up button 1 time, the motor will vibrate

LIMIT SETTING

Only have the power connected to one motor at a time

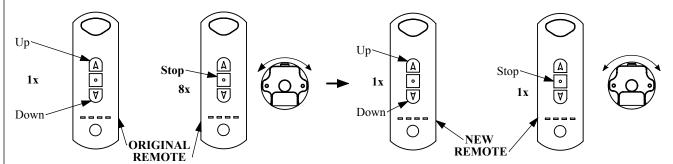

Adding a remote

This step will copy the remote you used to set the limits and create a duplicate

Copying a channel

This will cpoy individual channels to another multi channel remote

First make sure to have the indicator light on the channel you want to copy. Press the Up and Down buttons simultaneously, then release

Press the Stop button 8 times, the motor will vibrate

First make sure to have the indicator light on the channel you want to copy too. Press the Up and Down buttons simultaneously, then release

Press the Stop button 1 time, the motor will vibrate
